

Woodland Wildlife

One day workshop

Thursday 27th May

National Trust Ebworth Centre, near Stroud

The Royal Forestry Society have organised this introductory workshop on woodland wildlife which will include a look at how woodland grows and changes, habitat types, plant communities, ancient woodland indicator species and European Protected Species. We will discuss conservation issues such as habitat loss, fragmentation and climate change and look at management measures that enhance woodland wildlife.

In the afternoon you can practice basic botanical survey and mapping techniques to assess the nature conservation value of a nearby SSSI woodland. Suitable for woodland owners, students and enthusiasts with a love of woodlands.
